

**WINSTAR Display**

**OLED SPECIFICATION**

Model No:

***WEO002004C***

## General Specification

| Item                 | Dimension               | Unit |
|----------------------|-------------------------|------|
| Number of Characters | 20 characters x 4 Lines | —    |
| Module dimension     | 84.5 x 27.5 x 2.17      | mm   |
| View area            | 72.42 x 22.82           | mm   |
| Active area          | 70.42 x 20.82           | mm   |
| Dot size             | 0.57 x 0.57             | mm   |
| Dot pitch            | 0.60 x 0.60             | mm   |
| Character size       | 2.97 x 4.77             | mm   |
| Character pitch      | 3.55 x 5.35             | mm   |
| Display type         | OLED , Monochrome       |      |
| Duty                 | 1/32                    |      |
| IC                   | SSD1311                 |      |
| Interface            | 6800,8080,SPI,I2C       |      |
| Size                 | 2.89 inch               |      |

# Contour Drawing & Block Diagram

| PIN | SYMBOL    | PIN | SYMBOL |
|-----|-----------|-----|--------|
| 1   | NC        | 18  | D0     |
| 2   | VSL       | 19  | D1     |
| 3   | VSS       | 20  | D2     |
| 4   | REGVDD    | 21  | D3     |
| 5   | SHLC      | 22  | D4     |
| 6   | SHLS      | 23  | D5     |
| 7   | VDD       | 24  | D6     |
| 8   | VDDIO     | 25  | D7     |
| 9   | BS0       | 26  | IREF   |
| 10  | BS1       | 27  | ROM0   |
| 11  | BS2       | 28  | ROM1   |
| 12  | GPIO      | 29  | OPR0   |
| 13  | CS#       | 30  | OPR1   |
| 14  | RES#      | 31  | VCOMH  |
| 15  | D/C#      | 32  | VCC    |
| 16  | R/W#(WR#) | 33  | NC     |
| 17  | E(RD#)    |     |        |

The non-specified tolerance of dimension is ±0.3mm.

## Interface Pin Function

| Pin No. | Symbol                  | Pin Type | Description  |      |                    |   |                        |   |                         |
|---------|-------------------------|----------|--|------|--------------------|---|------------------------|---|-------------------------|
| 1       | NC                      | —        | No connection  |      |                    |   |                        |   |                         |
| 2       | VSL                     | P        | This is segment voltage (output low level) reference pin. When external VSL is not used, this pin should be left open. When external VSL is used, connect with resistor and diode to ground (details depend on application).   |      |                    |   |                        |   |                         |
| 3       | VSS                     | P        | Ground pin. It must be connected to external ground.   |      |                    |   |                        |   |                         |
| 4       | REGVDD                  | I        | Internal VDD regulator selection pin in 5V I/O application mode. When this pin is pulled HIGH, internal VDD regulator is enabled (5V I/O application). When this pin is pulled LOW, internal VDD regulator is disabled (Low voltage I/O application).  |      |                    |   |                        |   |                         |
| 5       | SHLC                    | I        | This pin is used to determine the Common output scanning direction.<br>COM scan direction<br><table border="1"> <thead> <tr> <th>SHLC</th> <th>COM scan direction</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>COM0 to COM31 (Normal)</td> </tr> <tr> <td>0</td> <td>COM31 to COM0 (Reverse)</td> </tr> </tbody> </table> <p>Note<br/>(1) 0 is connected to VSS<br/>(2) 1 is connected to VDDIO</p>                               | SHLC | COM scan direction | 1 | COM0 to COM31 (Normal) | 0 | COM31 to COM0 (Reverse) |
| SHLC    | COM scan direction      |          |  |      |                    |   |                        |   |                         |
| 1       | COM0 to COM31 (Normal)  |          |  |      |                    |   |                        |   |                         |
| 0       | COM31 to COM0 (Reverse) |          |  |      |                    |   |                        |   |                         |
| 6       | SHLS                    | I        | This pin is used to change the mapping between the display data column address and the Segment driver.<br>SEG scan direction<br><table border="1"> <thead> <tr> <th>SHLS</th> <th>SEG direction</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>SEG0 to SEG99 (Normal)</td> </tr> <tr> <td>0</td> <td>SEG99 to SEG0 (Reverse)</td> </tr> </tbody> </table> <p>Note<br/>(1) 0 is connected to VSS<br/>(2) 1 is connected to VDDIO</p> | SHLS | SEG direction      | 1 | SEG0 to SEG99 (Normal) | 0 | SEG99 to SEG0 (Reverse) |
| SHLS    | SEG direction           |          |  |      |                    |   |                        |   |                         |
| 1       | SEG0 to SEG99 (Normal)  |          |  |      |                    |   |                        |   |                         |
| 0       | SEG99 to SEG0 (Reverse) |          |  |      |                    |   |                        |   |                         |
| 7       | VDD                     | P        | Power supply for core logic operation. VDD can be supplied externally or regulated internally. In LV IO application (internal VDD is disabled), this is a power input pin. In 5V IO application (internal VDD is enabled), VDD is regulated internally from VDDIO. A capacitor should be connected between VDD and VSS under all circumstances.  |      |                    |   |                        |   |                         |
| 8       | VDDIO                   | P        | Low voltage power supply and power supply for interface logic level in both Low Voltage I/O and 5V I/O application. It should match with the MCU interface voltage level and must be connected to external source.   |      |                    |   |                        |   |                         |
| 9       | BS0                     | I        | MCU bus interface selection pins. Select appropriate logic   |      |                    |   |                        |   |                         |

| 10      | BS1                 |     | setting as described in the following table. BS2, BS1 and BS0 are pin select.<br>Bus Interface selection  |         |           |     |                  |     |         |     |                  |     |         |     |                     |     |                     |     |                     |     |                     |
