

WINSTAR Display

OLED SPECIFICATION

Model No:

WEO128128G

General Specification

Item	Dimension	Unit
Dot Matrix	128 x 128 Dots	—
Module dimension	25.9 x 30.1 x 1.26	mm
Active Area	20.076 x 20.076	mm
Pixel Size	0.137 x 0.137	mm
Pixel Pitch	0.157 x 0.157	mm
Display Mode	Passive Matrix	
Display Color	Monochrome	
Drive Duty	1/128 Duty	
IC	SH1107	
Interface	6800,8080,4-Wire SPI,I2C	
Size	1.12 inch

Interface Pin Function

No.	Symbol	Function															
1	VPP	This is the most positive voltage supply pad of the chip. It should be supplied externally.															
2	VCOMH	This is a pad for the voltage output high level for common signals. A capacitor should be connected between this pad and VSS.															
3	VDD	Power supply for logic and input.															
4	NC	Not connected.															
5	IM1	These are the MPU interface mode select pads.															
6	IM2	<table border="1"> <thead> <tr> <th></th> <th>8080</th> <th>I2C</th> <th>6800</th> <th>4SPI</th> </tr> </thead> <tbody> <tr> <td>IM1</td> <td>1</td> <td>1</td> <td>0</td> <td>0</td> </tr> <tr> <td>IM2</td> <td>1</td> <td>0</td> <td>1</td> <td>0</td> </tr> </tbody> </table>		8080	I2C	6800	4SPI	IM1	1	1	0	0	IM2	1	0	1	0
			8080	I2C	6800	4SPI											
IM1	1	1	0	0													
IM2	1	0	1	0													
7	IREF	This is a segment current reference pad. A resistor should be connected between this pad and VSS. Set the current at 15.625mA.															
8	CS	This pad is the chip select input. When CS = "L", then the chip select becomes active, and data/command I/O is enabled.															
9	RES	This is a reset signal input pad. When RES is set to "L", the settings are initialized. The reset operation is performed by the RES signal level.															
10	A0	This is the Data/Command control pad that determines whether the data bits are data or a command. A0 = "H": the inputs at D0 to D7 are treated as display data. A0 = "L": the inputs at D0 to D7 are transferred to the command registers. In I2C interface, this pad serves as SA0 to distinguish the different address of OLED driver.															
11	WR	This is a MPU interface input pad. When connected to an 8080 MPU, this is active LOW. This pad connects to the 8080 MPU WR signal. The signals on the data bus are latched at the rising edge of the WR signal. When connected to a 6800 Series MPU: This is the read/write control signal input terminal. When WR = "H": Read. When WR = "L": Write.															
12	E/RD	This is a MPU interface input pad. When connected to an 8080 series MPU, it is active LOW. This pad is connected to the RD signal of the 8080 series MPU, and the data bus is in an output status when this signal is "L". When connected to a 6800 series MPU, this is active HIGH. This is used as an enable clock input of the 6800 series MPU.															
13~20	D0~D7	This is an 8-bit bi-directional data bus that connects to an 8-bit or 16-bit standard MPU data bus. When the serial interface is selected, then D0 serves as the serial clock input pad (SCL) and D1 serves as the serial data input pad (SI). At this time, D2 to D7 are set to high impedance. When the I2C interface is selected, then D0 serves as the serial clock input pad (SCL) and D1 serves as the serial data input pad (SDA). At this time, D2 to D7 are set to high impedance.															
21	GND	Ground															
22	NC	Not connected.
